e

Purpose of talk: *Application developers...* **how to not sink...**

Purpose of talk: *RDF Publishers...* **how to avoid common mistakes...**

Talking about errors in Linked Data...

We'll try not to ruin the party

...statistics based on crawl:

- April 2009
- 5k domain limit
- 150k URIS, 55k RDF docs
- 12.5m triples (quads)
- Mentioning 1.6m URIs
- 5,850 classes/9,507 props
- Accept: application/rdf+xml

...okay... so no RDFa

Statistics are *illustrative*

Chapter 1: HTTP-level issues...

...a good RDF description these days is hard to find

Waldo URIs.

URIs with no dereferencable RDF

Digital Enterprise Research Institute

Not a crawler's idea of fun...

Hmm not *so* many...

- **5.3% of HTTP URIs return 40x/50x**
- **Excluding redirects...**
 - 92.8% return 200 OK**
- **In return, only 45.4% of 200 Okay return report application/rdf+xml**
- **34.8% return HTML... probably just HTML docs...
okay... maybe a *few* contain RDFa**

Lies... Damned Lies... & **Content-Type Reporting**

Digital Enterprise Research Institute

www.deri.i
e

“Trust me, it’s RDF/XML”

Okay... So he's actually pretty honest

- **16.9% of valid RDF/XML documents returned with an invalid/more generic**

Content-type:

text/xml (9.5%)

application/xml (5.9%)

text/plain (1%)

text/html (0.4%)

- **Of those returning**

Content-type: application/rdf+xml

98.8% were valid RDF/XML

Same triples, different document

I wish they'd used a redirect...

E.g., the **Miracle at Calais:**

turning 1,778 triples into $\sim \infty$ quads

<http://d.opencalais.com/1/type/em/r/SameTriplesDifferentDocument>

(analogous to OpenCalais guys - it's just a convenient example)

Chapter 2: Reasoning issues...

*...or, how I learned to start worrying and stop loving
OWL*

Undefined classes and properties...

It looks important, but I'm afraid I don't fully follow

Quite common...

- **14.3% of triples use undeclared property**
- **8.1% of triples use undeclared class**

■ Three cases:

- **Case 1: Namespace has no vocabulary/ is not deferencable**
(e.g., `rss:item`)
- **Case 2: Term invented in related namespace**
(e.g., `foaf:tagLine` invented by LiveJournal)
- **Case 3: Term is misspelt version of term defined in namespace**
(e.g., `foaf:image` vs. `foaf:img`)

Not-so-unique values for Inverse-Functional Properties

***Despite what you claim,
not all of you can *actually be* Spartacus***

Spartacus relived...

08445a31a78661b5c746feff39a9db6e4e2cc5cf

- **sha1-sum of 'mailto:'**
- **common value for foaf:mbox_sha1sum**
 - **An inverse-functional (uniquely identifying) property!!!**
 - **Any person who shares the same value will be considered the same**

****I'm Spartacus!****
...and so's my wife

Malformed/incompatible datatypes

***As he would undoubtedly be able to tell you,
"true" is not a valid xsd:int***

Not *too* bad...

- **4.7% of typed literals were “ill-typed” (lexically invalid)...**
 - **mostly `xsd:dateTime`s (26.4% of all date-time literals were invalid; e.g., omitted the seconds field)**
- **Also, literals are sometimes incompatible with the datatype-range of a property:**
 - **E.g., 21.8% of `ical:description` triples used language tags incompatible with the defined range of `xsd:string`**
 - **E.g., 100% of `sl:creationDate` triples use plain literal values incompatible with defined range of `xsd:date`**

Mystical beings...

Members of disjoint classes

***Despite what FOAF says, it seems that
Persons can also be Documents***

Again, not *too* bad...

■ 1,329 members of disjoint classes found

■ Generally caused by naïve URI naming:

- Use of information resource URIs to name entities (particularly foaf:Persons)

- E.g., `<me> foaf:knows <jim/foaf.rdf> .`

Ontology hijacking...

Anybody can say anything, anywhere, and unfortunately for everyone else, have a good chance of being taken seriously

Redefining Everything...

...and home in time for tea

From <http://www.eiao.net/rdf/1.0>

```
<owl:Property rdf:about="http://www.w3.org/1999/02/22-rdf-syntax-ns#type">
  <rdfs:label xml:lang="en">type</rdfs:label>
  <rdfs:comment xml:lang="en">Type of resource</rdfs:comment>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#testRun"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#pageSurvey"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#siteSurvey"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#scenario"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#rangeLocation"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#startPointer"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#endPointer"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#header"/>
  <rdfs:domain rdf:resource="http://www.eiao.net/rdf/1.0#runs"/>
</owl:Property>
```

Ontology hijacking!!

(apologies to EIAO guys - it's just a convenient example)

Solutions?

Application side: workarounds

- **All presented issues have a suitable
antidote, *once you know about them***
- **See paper for discussion...**

Publishing side: Validators!

- **Syntax errors quite rare, partly due to popularity of W3C RDF/XML syntax validator**
- **Need an all-in-one validation service**
 - **Should not only validate strict errors, but give feedback on suspected issues**
 - **We offer a prototypical service at:
<http://swse.deri.org/RDFAlerts/>**

Publishing side: Pedantic Web Group

- **Get the community to contact publishers about errors/issues as they arise**
- **Get involved: <http://pedantic-web.org/>**
- **137 members!**
- **Acknowledgements to: Aidan Hogan, Alex Passant, Me, Antoine Zimmermann, Axel Polleres, Michael Hausenblas, Richard Cyganiak,**

Sté...

...unattended, can be pretty serious...

```
foaf:mbox_sha1sum a owl:InverseFunctionalProperty .  
?x foaf:mbox_sha1sum 08445a31a78661b5c746feff39a9db6e4e2cc5cf .
```

OWL 2 RL rule prp-ifp:

```
?p a owl:InverseFunctionalProperty . ?x1 ?p ?z . ?x2 ?p ?z .  
⇒ ?x1 owl:sameAs ?x2 .
```

10⁶ ?x₁/ ?x₂ bindings in body

⇒ **10¹² inferred pair-wise and reflexive owl:sameAs statements**

...or in simpler terms:

**pow
!**
